BEFORE YOU READ

Nine pages in four groups

The derivatives pages split into the concept, the computation, the catalogue of results, and the extensions.

L0 **Derivatives** 9 pages

- L1 **Concept**
  - L2 **Graph analysis** signs of f′ and f″ control the shape
  - L2 **Derivative as a function** f′(x) as its own function
  - L2 **Differentiability** when the derivative exists or fails
- L1 **Computation**
  - L2 **Rules** algebraic procedures replacing the limit
  - L2 **Techniques** methods for non-explicit forms
- L1 **Catalogue**
  - L2 **Common** standard function derivatives
  - L2 **Special** families beyond the standard set
- L1 **Extension**
  - L2 **Higher-order** repeated differentiation
  - L2 **Differentials** $dy = f'(x) \cdot dx$

TAKEAWAY

Where to go next

Start with the concept pages, learn the rules and techniques, keep the catalogues as reference, and move to the extensions last.
